

Farm Fresh Eggs

HANDLING

Don't wash clean eggs. Freshly laid eggs have a natural coating called the **bloom** — an invisible seal that keeps bacteria out. Unwashed eggs stay fresh on the counter for 2–3 weeks.

If dirty, wash right. Use warm water — warmer than the egg, never cold. Rub gently, no soap. Dry immediately and refrigerate.

Store pointy-end-down. Unwashed on the counter. Washed in the fridge. Once refrigerated, don't move back to the counter.

Float test: Sinks flat = fresh. Stands up = use soon. Floats = crack separately & check.
